

MATEK

LYBER XXL

The world's first equine dental turbine

Unique, Practical, Durable

At Matek, we are always attentive to the needs of the market. That's why we developed the world's first dental turbine specifically designed for equine dentistry.

The LYBER XXL turbine, measuring 29 cm in length, was created to easily reach posterior teeth, enabling more effective interventions.

Equipped with a titanium body, it is both ultra-light and three times more resistant than steel.

In addition, its LED lighting ensures optimal visibility for greater precision during treatments.

LED

 MATEK LYBER XXL

EASY CONNECT

No more screwing the turbine onto the hose.

LYBER XXL comes with a quick-connect coupling (M4) for ultra-fast connection when purchased as a pack.

The EASY-GENLED quick coupling is equipped with a built-in LED generator that delivers powerful light directly to the turbine.

CLEAN HEAD SYSTEM

The Clean Head System features an anti-retraction mechanism that prevents blood and foreign substances from entering the head from the oral cavity.

As a result, the ball bearings and mechanical components last longer.

TITANIUM BODY

Corps en titane, léger et très résistant, avec un revêtement nano durable anti-corrosion NanoGrip®.

Sa légèreté réduit la charge au niveau de la main lors des traitements.

QUICKLY INTERCHANGEABLE

No more screwing and unscrewing your turbines and extensions from the hose.

With EASY-GENLED, you can quickly switch from the LYBER XXL turbine for rear teeth to the LYBER KL turbine for front teeth.
